OPERATIONS

In addition, AFCC had centers located at Scott AFB, Illinois, Tinker AFB, Oklahoma, and San Antonio, Texas. The 2199th Computer Services Squadron, provided automatic data processing services to Headquarters AFCC and the area headquarters. The AF Communications Computer Programming Center developed, implemented, maintained, and enhanced the operational software for designated communications electronics-meteorological computer systems. The San Antonio Data Service Center provided data processing support to area Air Force bases and designated federal agencies. It was the first of several regional centers to be established by the Air Force. The efforts of the approximately 2,600 military and civilian personnel at the various centers ensured that the ever increasing demands of commanders for more information, provided ever more rapidly, were met. At the same time, the work done by AFCC maintained the Air Force's position at the forefront of the highly technical and rapidly expanding field of automated data processing.
